

## ***HL Frequently Asked Questions (FAQ):***

***Question: What is HL?***

***Answer:*** HL is a viscous single-component protective material which is used for coating concrete and steel constructions to protect them from corrosion and destruction and can be made in any color.

***Question: Why choose HL?***

***Answer:*** While all other protective materials can be effective for 2 to 3 years only due to the negative effects of UV rays and water, HL can give excellent service for up to 5-6 years and is much cheaper and easier to apply than most protective materials.

***Question: Where has HL been used?***

***Answer:*** HL has mostly been used in Russia where it is most effective against extreme weather conditions and corrosive chemicals.

***Question: What is the material application rate per sq. meter?***

***Answer:*** The material application rate is dependent on the surface condition, and may vary from 700 grams to 1.2 kg per sq. meter.

***Question: Where can I find more information on HL and other HALIK products?***

***Answer:*** You can find contact information and more information on HL and other HALIK products on the HALIK website at [www.halik.biz](http://www.halik.biz)
